PRANAV KALE

Senior Associate - Technology

📱 +91- 9657211707   ✉ pranavmkale@gmail.com   in linkedin.com/in/pranav-kale-9a155127

Full-stack Software Engineer with nearly 4 years of experience in the computer software industry, targeting Front-end Developer or Full Stack Java Developer roles in Pune or remote. Aiming to leverage expertise in JavaScript, React.js, Ember.js, and Java to develop innovative solutions and contribute to organizational success
Personal Website: www.pranavkale.me

🎓 Education

2018: **PG Diploma in Advanced Computing**
Centre for Development of Advanced Computing (C-DAC)

2015: **Bachelor of Engineering (B.E.), Electronics Engineering**
All India Shivaji Memorial Society's College of Engineering, Pune

2012: **Diploma in Electronics and Communication**
Government Polytechnic Khamgaon

📑 Core Competencies

- Full Stack Development
- Java Development
- Web Services
- Testing and Debugging
- Performance Optimization
- Front-End Development
- Back-End Development
- Requirement Gathering
- Crossfunctional Collaboartion

⚙ Technical Skills

- o Git
- o Java
- o Object-Oriented Programming (OOP)
- o Python
- o C
- o Angular2

👤 Profile Summary

- **Possess experience in the software industry**, focusing on Full-stack development and working with industry-leading technologies
- Currently working as a **Senior Associate - Technology at Synechron**, actionable for developing new features and fixing bugs in a banking application with worldwide users.
- **Displayed proficiency in JavaScript, React.js, Java (Spring Boot), Microservices, postgreSQL** with a deep understanding of DOM manipulation, authorization mechanisms, and the JavaScript object model
- **Proficient in both front-end and back-end Java development**, capable of building end-to-end solutions that deliver seamless user experiences
- **Proven track record of designing and implementing RESTful APIs,** ensuring efficient communication between various components of complex systems
- **Skilled in writing unit and integration tests,** set up continuous integration/continuous deployment (CI/CD) pipelines, and deploy applications
- **Proactive approach to troubleshooting and debugging, identifying issues** swiftly and implementing effective solutions to optimize application performance
- **Designing and developing custom content management systems** or utilizing existing ones to facilitate content creation, editing, publishing, and management
- **Strong skills in developing backend systems**, including API design, database integration, and server-side logic implementation

💼 Work Experience

Sept' 23- Present: Senior Associate - technology | Synechron technologies
Key Result Areas:
- Developing new features and fixing bugs in a Micro service architecture banking application with worldwide users
- Java, Spring boot, microservices, postgreSQL are the backend technologies used.
- React JS and Nextjs are used in the frontend
- Conducting code reviews, providing guidance to junior developers, and maintaining a collaborative work environment
- Utilizing Git, IntelliJ, and VS Code as primary tools for version control and software development
- Debugging and troubleshooting issues, identifying root causes and implementing effective solutions
- Writing comprehensive test cases using JUnit, Jest, and Q-Unit for Java, React.js,respectively, ensuring robust and reliable software.
- Creating and maintaining technical documentation, including design specifications, user guides, and API documentation

Highlights:
- Proactively participated in code reviews and provided guidance to junior developers, fostering a culture of continuous improvement and knowledge sharing

⚙ Certifications

o   SQL (Intermediate) - HackerRank
o   Implement OOPS using JAVA with Data Structures and Beyond - Simplilearn

⚙ Soft Skills

o   Adaptability
o   Team Management
o   Attention to Detail
o   Problem-solving
o   Time Management

- Worked closely with developers, product managers, and other stakeholders to communicate testing progress and results. This gave me global exposure as our team is in various different countries.

May'21- Sept' 23: Software Engineer | Raja Software Labs
Key Result Areas:

- Developing new features and fixing bugs in a social media application with 500 million+ users, utilizing React.js, Ember.js, and Java (Spring Boot) to deliver high-quality software solutions
- Writing comprehensive test cases using JUnit, Jest, and Q-Unit for Java, React.js, and Ember.js respectively, ensuring robust and reliable software
- Conducting code reviews, providing guidance to junior developers, and maintaining a collaborative work environment
- Utilizing Git, IntelliJ, and VS Code as primary tools for version control and software development
- Debugging and troubleshooting issues, identifying root causes and implementing effective solutions
- Creating and maintaining technical documentation, including design specifications, user guides, and API documentation

Highlights:

- Proactively participated in code reviews and provided guidance to junior developers, fostering a culture of continuous improvement and knowledge sharing
- Worked closely with developers, product managers, and other stakeholders to communicate testing progress and results

Dec'19- May'21: QA Engineer | eGain Corporation
Key Result Areas:

- Assisted development teams in fixing accessibility-related tickets using React.js, ensured a seamless user experience
- Written test cases using JUnit and Jest frameworks, contributed to the overall quality of software solutions
- Utilized Jira for bug reporting and tracking, Confluence for documentation, and SVN and Git for version control
- Conducted performance testing to assess the application's responsiveness, scalability, and stability under different conditions

Highlights:

- Successfully automated test cases for a CRM application using Selenium and Java, resulted in reduced manual effort and increased efficiency

Jun'15- Dec'19: Junior Engineer | Bharat Sanchar Nigam Ltd.
Key Result Areas:

- Supported telecom systems, including testing and maintenance of large-scale SDH and CPAN systems, ensured uninterrupted service
- Developed a strong understanding of programming languages, frameworks, tools, and technologies relevant to the role
- Analyzed technical challenges, debug issues, and propose solutions under the guidance of senior team members
